Technical Specifications

Kettle Thermostat

The thermostat "feels" the heat from the steam. Once the water is boiling, it automatically shuts off the kettle to keep you safe and save energy.

Key Features & USPs (updated)

Powered by Original Strix Thermostat (UK) – world's most reliable thermostat

Fast boiling (0.50 to 1 mins)

Auto shut-off + boil-dry safety

Cool-touch handle, cordless base

Designed for 24x7 hotel usage

100% stainless steel interior – no plastic contact with water

Problems with **Low-Quality** Thermostats:

⚡ Hidden Electricity Cost Due to 1-Minute Delayed Cut-Off in Hotel Kettles

📊 Per Kettle Calculation:

- Cut-off Delay per Use: 1 minute
- Uses per Day: 5 times
- Total Delay per Day: 5 minutes
- Monthly Delay: 5 min/day × 30 days = 150 minutes (2.5 hours)
- Estimated Extra Electricity Usage: - 8 units per month
- Electricity Rate: ₹8 per unit

➡ Monthly Extra Expense per Kettle:

$$8 \text{ units} \times ₹8 = ₹64$$

➡ Yearly Extra Expense per Kettle:

$$₹64 \times 12 \text{ months} = ₹768$$

🏠 Now Multiply by 150 Hotel Rooms (Kettles):

- **Monthly Hotel-Wide Extra Cost: ₹40 × 150 = ₹9,600**
- **Yearly Hotel-Wide Extra Cost: ₹768 × 150 = ₹1,15,000**

Types of Electric Kettles: **Single vs Double Layer**

Feature	Single Layer Kettle	Double Layer Kettle
 Heat Insulation	Poor – outer body gets very hot	Excellent – stays cool to touch
 Safety	Higher burn risk	Safer – protects users from accidental burns
 Heat Retention	Loses heat quickly	Retains heat longer
 Material	One layer (usually stainless steel)	Inner stainless steel + outer plastic/PP layer
 Noise & Boil Vibration	Louder and more vibration	Quieter operation
 Energy Efficiency	Slightly lower – more heat loss	Better – less heat lost to surroundings

304 vs. 201 Stainless Steel – Why Laxree Offers Superior Quality

Feature	304 Grade Stainless Steel	201 Grade Stainless Steel
✔ Nickel Content	High (8–10%) – improves corrosion resistance	Low (1–2%) – less resistant to corrosion
🛡️ Corrosion Resistance	Excellent – Rust-proof even in hot	Poor – Prone to rust over time
🔥 Heat Resistance	Withstands high temperatures safely	Less stable under continuous heat
🍷 Food Safety & Hygiene	Food-grade, safe for daily boiling	Not food-grade certified in many cases
🧲 Magnetic Properties	Non-magnetic (after cold work)	More magnetic, indicates lower grade
🕒 Longevity	Lasts 5–10+ years	Shorter life span

What Is Corrosion?

Corrosion is a natural process that converts a refined metal into a more chemically stable oxide

304 vs. 204 Stainless Steel

At Laxree, we use 304 Grade Stainless Steel for our electric kettles, while many other brands compromise by using 204 Grade SS, which may look similar but performs very differently.

We disclose stainless steel grades on every product — because quality should never be hidden.

We Choose Copper wire — Because Customer Safety Comes First

At Laxree, we use pure copper wires in our kettles for superior safety, performance, and energy efficiency.

Why Copper is Better:

- Excellent conductivity
- Safer under voltage fluctuations
- More energy-efficient
- Durable & long-lasting

Why Not Aluminium?

- Poor conductor – increases power loss
- Heats up quickly – risk of melting & short-circuits
- Raises electricity consumption
- Shorter lifespan

BIS & ISO Certified

Durable Lid Connectors & Reliable After-Sales Support

At Laxree, our electric kettles feature strong, high-quality lid connectors designed for long-term durability, even with frequent daily use in hotels. We also repair support, ensuring hassle-free maintenance and extended product life for all our hospitality partners.

Smart Hospitality Choice: 0.6L–1.2 L Kettles Over Larger Volumes

- Higher electricity consumption due to heating more water than needed
- Increased water usage, especially when guests boil excess water
- Longer heating time, reducing energy efficiency
- Unnecessary cost for the hotel, particularly across multiple rooms

Our compact models are ideal for making 1–2 cups of tea or coffee, which is generally sufficient for hotel guests, while also helping hotels save on power and water bills across the property.

Do you offer a warranty?

Yes, our kettles come with a standard warranty (usually 1 year, depending on the model). Please check your invoice or product box for details.

What is the kettle made of? Is it safe to use?

Yes, our kettles are made with high-grade 304 stainless steel, which is food-safe, rust-resistant, and durable. It ensures clean and hygienic boiling every time.

Is the outer body heatproof?

Our double-layer kettles have an insulated outer body to prevent accidental burns. Single-layer models may get hot, so handle with care.

Target Market & Use Cases

Hotels/Resorts – Room amenities

Corporate Offices – Pantry areas

Hospital Rooms – Patient convenience

Airbnb/Villa Owners – Guest comfort

Resellers – Distributors for hospitality items

**QUIZ
TIME**

1. What grade of stainless steel is used in Laxree kettles?

- A. SS 202**
- B. SS 204**
- C. SS 304**
- D. SS 201**

2. Why is copper wire used instead of aluminium in Laxree kettles?

- A. It's cheaper**
- B. It looks better**
- C. It's a better conductor and safer**
- D. It's lighter**

3. What is the function of the thermostat in the kettle?

- A. Keep the water cold**
- B. Increase electricity use**
- C. Automatically cut off power after boiling**
- D. Change the water taste**

4. What happens if a low-quality thermostat is used?

- A. Faster boiling**
- B. Prolonged cut-off and more electricity usage**
- C. Better safety**
- D. No difference**

5. What's a key benefit of using double-layer kettles?

- A. They look bigger**
- B. They consume more power**
- C. Anti-scalding protection and heat insulation**
- D. Easier to clean**

6. What certification do Laxree kettle wires have?

- A. ISI only**
- B. No certification**
- C. BIS and ISO**
- D. FDA**

THANK
YOU
